Move all terms containing c to the left, all other terms to the right. Add '49' to each side of the equation. $-49 + 49 + c^2 = 0 + 49$ Combine like terms: $-49 + 49 = 0$ $0 + c^2 = 0 + 49$ $c^2 = 0 + 49$ Combine like terms: $0 + 49 = 49$ $c^2 = 49$ Simplifying $c^2 = 49$ Take the square root of each side: $c = \{-7, 7\}$

Its the same in C and objective C. The character has much more significance in C and it serves as a reserved character used to signify the end of a string, often called a null-terminated string. The length of a C string (an array containing the characters and terminated with a '\0' character) is found by searching for the (first) NUL byte.
