BW Offshore's environmental impact is measured by the operational performance of its FPSOs against key performance indicators. In 2019, environmental reporting was integrated into the assets' electronic daily reporting process.

### Environmental Impact - BW Offshore

There's no easy answer to the offshore oil drilling debate. In my mind it's clear that offshore drilling has a very negative environmental impact. However, even if there wasn't an environmental impact from its day to day operations, I would probably still be opposed to it because of the risk of catastrophic oil spills.

### The Environmental Impacts of Offshore Oil Drilling ...

The major environmental concerns related to offshore wind developments are increased noise levels, risk of collisions, changes to benthic and pelagic habitats, alterations to food webs, and pollution from increased vessel traffic or release of contaminants from seabed sediments.

### Assessing environmental impacts of offshore wind farms ...

Based on findings and information from currently active wind farms, the overall environmental impact of offshore wind in Ocean City will be positive. The area will experience a decrease in carbon emissions resulting from increased biodiversity because of creation of new habitat and food sources,

as well as increased total biomass.

The petrochemical plants built nearby add to the negative effects [source: Jervis]. Not so fast, say supporters of offshore drilling: Improvements in technology and better government oversight have made drilling inherently safe. In fact, since 1975, offshore drilling has had a 99.999 percent safety record [source: EIA]. The amount spilled has decreased from 3.6 million barrels in the 1970s to less than 500,000 in the '90s.

Offshore wind turbines can have similar impacts on marine birds, but as with onshore wind turbines, the bird deaths associated with offshore wind are minimal. Wind farms located offshore will also impact fish and other marine wildlife. Some studies suggest that turbines may actually increase fish populations by acting as artificial reefs.
