Few-shot and one-shot learning enable a machine learning model trained on one task to perform a related task with a single or very few new examples. For instance, if you have an image classifier trained to detect volleyballs and soccer balls, you can use one-shot learning to add basketball to the list of classes it can detect.

Machine learning with less than one example - TechTalks

Deep learning algorithms are notorious for requiring large amount of training examples to perform simple tasks such as detecting objects in images. But interestingly, if configured properly, deep neural networks, the key component of deep learning systems, can perform one-shot learning on simple tasks. In recent years, one-shot learning AI has found successful applications including facial recognition and passport checks.
