ABC analysis suggests that inventories of an organization are not of equal value, thus can be grouped into three categories (A, B, and C) by their estimated importance. “A” items are very important for an organization. “B” items are of medium importance, that is, less important than “A” items and more important than “C” items.

## **ABC Analysis - SAP Help Portal**

When it comes to stock or inventory management, ABC analysis typically segregates inventory into three categories based on its revenue and control measures required: A is 20% of items with 80% of total revenue and hence asks for tight control; B is 30% items with 15% revenue; whereas ‘C’ is 50% of the things with least 5% revenue and hence treated as most liberal.

## **ABC Analysis - The Complete Guide with Examples | Orderhive**

Rule of ABC Analysis. ABC analysis classifies inventory into 3 categories: Class A – forms 15% to 20% of the stock quantity but commands 80% to 85% of the value. Class B – forms 30% to 35% of the stock quantity but commands 10% to 15% of the value. Class C – forms 50% of the stock in terms of quantity but commands only 5% of the value.
