Query Manager™: Solving your SAP HCM Reporting challenges

SAP Query or Ad-hoc Query or InfoSet Query is a tool that allows the end-user to design different queries based on different input and output parameters in the SAP system according to the requirement. This is one of the reporting tools majorly used in the HR Module to pull data from relational databases.

SAP - Quick Guide - Tutorialspoint

SAP Query enables data from multiple tables to be extracted in one report, as long as at least one field of data can be linked from one table to another e.g. by Document Number. Unlike table browser (SE16), reports from SAP Query can be saved.

SAP Query Step by Step Guide - STechies

With Query Manager on SAP Business One, not just a select syntax, you can also use a selection criteria, and added to your custom query. Here is a simple query sample with a date criteria parameter. With a [Date From] - [Date To] on OINV Table. declare @FromDate date declare @ToDate date. set @FromDate = '2019-01-01' set @ToDate = '2019-01-31'

How to Use Custom Parameter on Query Manager | SAP ...

Explanation. A QUERY specification specifies a result table. The result table is generated from a temporary result table. The temporary result table is the result of the table expression. If the QUERY expression consists of only one QUERY specification (query_spec), the result of the QUERY expression

is the unchanged result of the QUERY specification.

QUERY Expression (query_expression) - SAP Documentation

I'm going to be making "use" of this query often as a template and example of how to quickly and easily setup future Query Manager queries. I know some people like to make things more complex and sort of "merge" the declare statements with the SET statements... but I just find that outright confusing.
